- Flow rates between 0.25-60 GPM
- AC Variable Frequency Drives
- Stainless Steel Gear Pumps
- Relief Valve
- Calibration Assembly
- Pump Priming Configuration
- Designed for harsh duty
- Minimal set up time
- Designed for easy maintenance

Pre-engineered for the metering and transfer of chemicals in industrial applications, the MetPak product line fills the need of most pump applications.

Our experience of fifty years dealing with the mixing and metering of chemicals puts us in a position to maximum flexibility and economy in an off the shelf solution for many chemical metering applications.

The simple skid mounted design is available with a variety of sizes, allowing you to meter with a ten to one turndown ration across each range.

Each pump size is available in either mechanically sealed or seal-less design.

A variety of options can be added to the system like flow meters, dilution and in line mixers.

The system components and design can be expanded to add functionality .

With the addition of dilution valves and a flow meter the Metpak becomes a basic chemical feed system that is perfect to use in waste treatment applications for the addition of solution polymers.

- Construction – 304 S.S.
- Enclosure – Nema 4X
- Electrical – 440 Volts AC, 3 Phase, 40 Amps, 60 Hz
- Wetted Materials – S.S., PVC, Polypropylene
- Connections – S.S. threaded coupling
- Dimensions – 99H x 74W x 60D
- Discharge Pressure – 225 PSI max

Give us a call to build up the right system at the right price and get it right away!

Metpak Metering Systems

Complete metering pump packages

The MetPak product line is design to provide you with an "off-the shelf" solution for your fluid metering requirements. Models cover flow rates as low as 0.063 GPM(0.018 LPM), up to flows in excess of 60 GPM (227 LPM).

The MetPak family includes diaphragm, piston, gear and helical rotor pumps in a variety of configurations. Each system is fully optionable, allowing you to add features or customize the package to meet a specific need.
